### ***Allowable Subject Matter***

2. Claims 1-5 are allowed.

### ***Reasons for allowance***

3. The following is an examiner's statement of reasons for allowance:

Regarding independent claim 1, Shpak teaches an access point capable of communicating in a wireless communications network via a radio frequency channel (see fig. 1, access points (AP) 22-23, 25 and 27, communication with multiple mobile station 24, 29 and 31), comprising: logic for detecting that one or more other access points are also using the radio frequency channel (see figs. 1-2, col. 3, lines 5-16, and col. 4, lines 10-44), and logic responsive to the logic for detecting for adjusting transmit power (see col. 4, lines 40 - col. 5, lines 18). However, Shpak alone or in combination with other prior art of record, fail to disclose; A first access point capable of communicating in a wireless communications network via a radio frequency channel, comprising: logic for obtaining data indicative of distance to a mobile terminal device that is associated with the first access point on the radio frequency channel; logic for detecting that a second access point is also using the radio frequency channel; and for adjusting transmit power as a function of distance to the second access point and distance to the mobile terminal device such that: if the second access point is nearer to the first access point than the mobile terminal device, setting transmit power based on distance to the mobile terminal device; if the second

access point is not nearer to the first access point than the mobile terminal device, setting transmit power based on distance to the second access point, as specified in independent claim 1.
